La prophylaxie pré-exposition au VIH

Prep

Accompagner sa dispensation en pharmacie

L'association antirétrovirale fixe emtricitabine/ténofovir disoproxil a obtenu, en août 2016, une extension d'indication « européenne » dans le cadre de la prophylaxie pré-exposition au VIH (PrEP). Cet outil complète le dispositif de prévention de l'infection par le VIH. Élaboré par l'association AIDES en partenariat avec le Cespharm, ce document a été conçu pour accompagner les pharmaciens dans leur pratique : aide à la compréhension et à la dispensation de la PrEP leur permettant d'accompagner au mieux les personnes suivant ce traitement.

PrEP in a community-based sexual health clinic: The example of The Spot Longchamp - Marseille

Sarah LABLOTIERE Coordinator of the Spot Longchamp PrEP in Europe Summit 12th of october 2019 - Warsaw

The SPOT Longchamp

A community-based sexual health clinic for people most exposed to HIV and STI: MSM, especially chemsexers, trans people, sex workers, immigrants, in particular LGBTI+ and newcomers from sub-saharan Africa.

Driven by a *friendly* a multidisciplinary team.

A specific communication strategy: community-based outreach interventions, promotion on dating apps and website and posters in community venues.

A wide range of medico-social services.

The Spot's PrEP pathway: community-based approach and global health provision.

Community-based individual support is a main component of PrEP's follow-up:

- Promotion of PrEP to all people who come to Spot for a test (65% of the PrEP patient base).
- Organization adapted to needs: opening hours, online appointment with reminder.
- Empowerment in the relationships with caregivers.
- Reducing the number of people lost to follow-up and permit long time care.
- Community mobilization.
- Specific and need's adapted PrEP follow-up.

PrEP follow-up: global health benefits

PrEP users followed at the Spot:

420 people: 332 MSM born in France (79%), 56 MSM immigrants (13%), 20 trans people (5%), 12 women (3%).

All those on PrEP at the Spot can benefit from:

- Vaccines catch-up: HAV, HVP, HPV.
- Referal to sexologists to help improve quality of sex life.
- Regular medical follow-up.

In the pipeline :

- Faster initiation of treatment following testing (90 minuts).
- Digital services: self-determined reminders, hotline, anonymised STI partner notification.

Adapted PrEP plans depending on specific needs

PrEP pathways depending on specific needs of the different public.

- MSM born in France:
- Focus on chemsex support: specialised addiction consultations, self-support groups, individual support.
- Developing referal partnerships locally with supportive health workers.
- Trans people:
- Transitions services : hormonal-therapy, gynaecological and psychologiccal consultations, social work for access to rights.
- Partnerships with trans organizations.

Adapted PrEP pathways depending on specific needs

- Immigrants MSM and sex workers:
- Specific services : translation service, social work for asylum procedure support, psychological trauma care, self-support groups "LGBT immigrants Group" and "Whore Teatime"
- Self support capacity building within the communities.
- Greater engagement with immigrant organizations to promote PrEP.
- Develop specific tools (like PrEP record) to help with follow –up.

To Conclude

- PrEP: opportunity for a better and global sexual health.
- Community-based health clinic seem to be particularly adapted for reaching and engaging the most vulnerable populations.
- Community-based individual and collective support for immigrants must be developed.
- Simplified follow-up of MSM the closest to care: in city, fast testing, online consultation, demedicalize the follow-up.
- Improve the access and follow-up of PrEP: Adapt and integrate pathway with primary health care responses.

Thank you for your attention
